## Installation of Shockwatch label

The Shockwatch label is an impact indicator device that will activate when an impact level exceeds a predetermined level.

So some care has to be taken when handling the label

The label is installed on the back side of the battery (opposite side of the terminals).

The position of the label is in the center of the battery housing.

Please note the serial number of the Shockwatch label and serial number of the battery pack.

Please send the noted serial numbers to [info@lzdesign.si](mailto:info@lzdesign.si) and [info@hph.cz](mailto:info@hph.cz) so that we can track them.
